SPORT PERFORMANCE

C-MATIC

Top level design and engineering for athletes who expect uncompromisingly perfect performance and function.

The new C-MATIC confidently sets a new benchmark with its streamlined, progressive, and elaborate shield look design. The almost goggle-like coverage ensures optimized protective function and offers a completely unrestricted panoramic visual field in XXL format. The new Hypervent air intakes guarantee effective antifog air flow. The four high-definition lens options of the C-MATIC in the dynamic wraparound shape meet every individual requirement. All lens options feature outstanding optical quality and performance.

The lightweight, yet secure frame also offers technical innovation. The patented Super-Flex TR90 half-frame guarantees optimum fit for any activity. Thanks to integrated elastomer damping elements, the C-MATIC defines a completely new level of comfort.

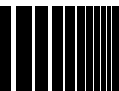

The Super-Flex frame adapts to different head widths without any pressure around the ears. Adjustable nose pads and temple tips with anti-slip elements complete the package to ensure maximum comfort. The shape of the slim shaped temples is finetuned for harmonious combination with the helmet. AutoSnap hinges allow the goggles to be securely placed with one hand operation while riding.

C-MATIC NXT MIRROR PHOTOCHROMIC

The aspiring new C-MATIC NXT MIRROR is the complete all-in package for perfect visual performance and safe eye protection. Thanks to the reliable NXT technology with split-second transition, you are perfectly equipped for fast-changing light conditions. From now on, you can skip the time-consuming task of changing lenses. The high-contrast visual perception lets you react faster. An additional mirror coating protects against infrared radiation and harmonizes color details. The comfort of the Super-Flex frame and the unrestricted panoramic lens make you forget you're wearing glasses. Experience a completely new visual experience.

C-MATIC COLOR+ SPORT

Whether you ride a traditional or electric bike, you are moving in nature. This is exactly the terrain in which the C-MATIC with the COLOR+ SPORT lens performs best. Specifically tuned for outdoor color tones, the amber filter enhances contrasts and color details for a fascinating viewing experience in XXL format. You can react safely to critical situations on the trail or gravel with perfect visual acuity. You will see your single trail from now on with other eyes, but they are still yours. The lightweight Super-Flex frame, adjustable nose pads, and elastomer grippers on the temple ensure that the glasses remain in place, even on really rough terrain. The perfect fit and comfort also make the C-MATIC your favorite running glasses.

C-MATIC COLOR+ LIFESTYLE

Urban landscapes are your favorite playground, whether by bike or running. You're looking for a pair of sports glasses with impressive performance features, especially in an urban environment. Then the C-MATIC with COLOR+ LIFESTYLE lens fits your lifestyle perfectly. This COLOR+ gear is tuned to the color spectrum of gray and blue tones, which allows it to filter out reflections from streets or buildings and produce really high contrast definition during daily commuting. This way, you can keep an eye on everything, even in rush hour. The wraparound shape also protects against wind and dust. By the way, the C-MATIC also makes a real design statement when you relax with an espresso.

SPORT PERFORMANCE

C-LITE

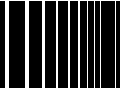

Super light and extremely flexible.

The new C-LITE combines top-level sports performance with functional understatement. With its rather moderately large but still effective coverage, the C-LITE is above all weight-optimized. It is also perfectly suited for smaller faces. The C-LITE also offers all the lens options of the C-MATIC series – from NXT glass to COLOR+ options. This makes the C-LITE the sports glasses with the highest versatility, suitable for almost all sports types, from cycling and triathlon to outdoor fun.

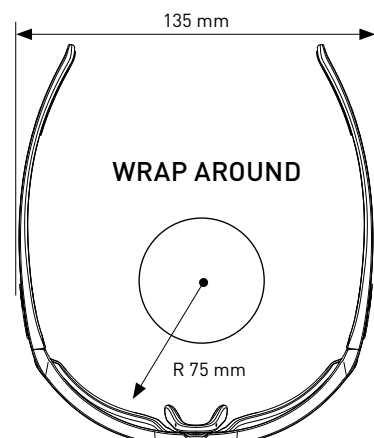

lens: clear/red mirror, frame: black rubber
120301H5

C-LITE NXT MIRROR PHOTOCHROMIC

Whether you're chasing your bike, your inline skates, or your running shoes across the tarmac, you'll definitely be dealing with changing light conditions on your rounds. Thanks to the reliable NXT technology with tint adaptation in a matter of seconds, you are always ready for the next. Time-consuming changing of interchangeable lenses is a thing of the past. An additional mirror coating protects against infrared radiation and harmonizes color details for a visual experience beyond comparison. The feather-light and flexible TR90 frame with adjustable nose pads and temple tips with anti-slip grip make the C-LITE NXT MIRROR nearly imperceptible. The medium-sized shape of the glasses guarantees a very large visual field and sufficiently large coverage. Despite the intricately elegant design, the TR90 frame is extremely durable and flexible.

C-LITE COLOR+ LIFESTYLE

With these ultra-lightweight glasses, you'll be equipped for sports and everyday life – from sunrise to sunset. Your e-bike takes you to the office in the morning and in the evening you power your gravel bike through the park – no matter what you are doing, the C-LITE is always the right choice. The COLOR+ LIFESTYLE technology reduces the light intensity, which helps you maintain your ability to focus and slows down how quickly you get tired. In addition, the filter is tuned to the color spectrum of gray and blue tones, which makes it better at filtering out reflections from roads or buildings.

FUTURO POLARIZED

Pure cycling.

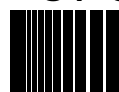

These lightweight cycling glasses in classic aerodynamic design represent pure performance. The FUTURO POLARIZED is perfectly shaped for combination with helmets and is very well ventilated. Furthermore, the high flexibility of the TR90 frame ensures a wobble-free and secure fit, even on the worst pavement sections. The high-quality lens with polarizing filter guarantees high-contrast vision without reflections, such as those caused by wet roads. Two additional interchangeable lenses in clear and orange are included for changing light conditions.

TECHNOLOGIE

NXT TECHNOLOGY

The extremely resistant Italian PU lenses of the latest NXT lens generation guarantee fast automatic tinting and optimized adaptation to changing light conditions. We are not just talking about varying daylight due to a change in the weather or the onset of twilight. A change in light when you are riding from a shady patch of forest to a bright clearing and vice versa is a much more critical scenario. However, it is not a problem with our NXT lens. Within a few seconds your glasses change to an adjusted tint level. This time span is also known as the transition. The unique NXT technology differs from other photochromic lenses made of polycarbonate because of its long-lasting self-tinting function.

COLOR+ TECHNOLOGY

On the trail or on the road, quick reaction is what counts in critical moments. The prerequisite for this is crystal-clear optical perception under all lighting conditions. With lenses featuring COLOR+ technology, critical situations are detected more rapidly. COLOR+ are contrast-enhancing high-definition lenses with impressive color brilliance. Disruptive stray light and reflections are filtered out and harmful infrared light is reflected. Rapid changes in light and shade are balanced. The technology also ensures 100% UV protection.

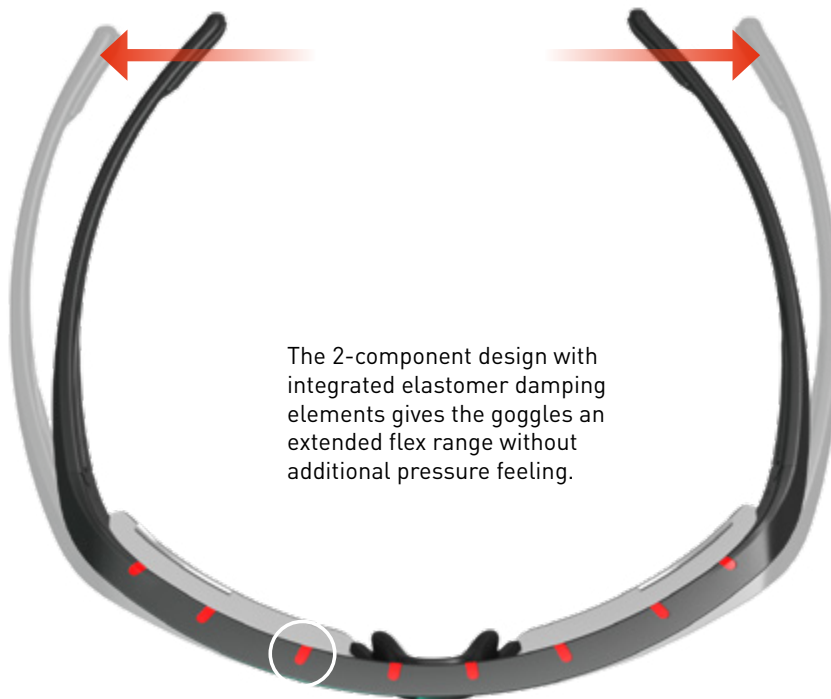

The COLOR+ SPORT version with amber tinting optimizes high-contrast perception in off-road and on-road terrain and ensures a harmonious transition between bright and shaded areas.

COLOR+ LIFESTYLE is optimized for lighting conditions in urban environments and for building or road reflections.

HYPERVENT SYSTEM

Aerodynamically optimized air intakes in the lens ensure effective antifog ventilation and comfortable air circulation without exposing the eyes to direct airflow.

The 2-component design with integrated elastomer damping elements gives the goggles an extended flex range without additional pressure feeling.

C-MATIC SUPER-FLEX

The (patented) Super-Flex half frame of the new C-MATIC guarantees a secure fit under any conditions. This ensures that the Super-Flex frame adapts perfectly to different head widths without any pressure points in the ear area.
